

Performance on a bigger scale

Preliminary version

**A high-end compact utility machine for all-day
maintenance of large outdoor areas**

High flexibility and manoeuvrability

- allows for multifunctional use and access to all areas

The new City Ranger 3070 sets new standards in this machine class in many areas: multifunctional use, Quick-shift, manoeuvrability, operator comfort and environmental considerations, just to mention some.

An innovative multifunctional machine

Thanks to the unique Quick-shift, attachment changes can be made in just one minute. Simply pick-up the front attachment with the machine, turn the handle and all mechanical, hydraulic, water and electrical systems are connected and ready to go. It couldn't be easier! You can, therefore, easily use the machine for different tasks during the day without wasting time on attachment changes in the workshop. And we all know: time is money.

Access to all areas

With the powerful articulation, the City Ranger 3070 has an incredibly small inside turning circle of only

1650 mm allowing operators to access confined spaces and to operate close to obstacles. Also with the basic machine weighing only 1710 kg, ground pressure is low enough to be used on sensitive surfaces like lawns and pavements.

A good working environment

Operating a machine for many hours a day can be demanding on the operator. Therefore we have focused on ensuring optimum operator comfort. Factors such as a multi-adjustable working position, low cabin noise - only 69 dB(A), a unique ventilation system with A/C as standard and a 360 degree view of the work area are just some of the features contributing to a good working environment.

Environmentally friendly and powerful machine

The 67 HP strong diesel engine has low fuel consumption and emission rates meeting green zone requirements in cities. Another important factor, when considering the environment the machine operates in, is noise. The noise level experienced when the machine passes by you is only 76 dB(A). The ECO mode function, which can be activated in working mode, lowers fuel consumption even further and reduces noise levels. This benefits both your operating costs and the surroundings - making the City Ranger 3070 a perfect match for cities and residential areas.

One minute function

- saves time and maximises the use of your investment

High efficiency and safety

The unique Quick-shift function on the City Ranger 3070 will increase your efficiency as it is a one minute one person job. Tools are not needed and only very little training - simply pick up the front attachment with the machine and turn the handle, which connect the mechanical, hydraulic, water and electrical systems. The rear attachments are equally easy to change with the optional stand. There is no heavy lifting involved. On the display in the cabin you select the relevant attachment and you are quickly ready to continue your day performing a new task.

The Quick-shift is not only efficient but also safe for both operator and machine. The fact that it is a one man job means there is no risk of a colleague getting hurt in the process, because he/she is walking in front or behind the machine. Furthermore, the automatic attachment of all systems eliminates the risk of damaging the machine due to wrong connections.

change

Save money

Only having to invest in one machine for performing many different outdoor maintenance tasks has many benefits:

- Low initial investment
- More yearly working hours
= quick return on investment
- Just one machine
= less training for operators
- Less space needed for storage facilities

The Egholm name is your guarantee for superior craftsmanship, perfect cleaning results and a tidy, attractive city for all those who use it every day.

City Ranger 3070

Articulated steering

Powerful diesel engine

4-wheel drive

Low ground pressure
due to wide footprint

Small turning circle

A proven concept

The City Ranger 3070 is versatile, but it is also specialised to suit your daily tasks. With the wide range of attachments available during 2020, you have a machine that performs every task perfectly without compromise in quality, speed or final result.

The sturdy A-frame on the vehicle, originally invented by Egholm, allows the operator to change attachments without tools. All mechanical, hydraulic, water and electrical systems are connected by simply turning one handle - and the machine is ready to set off. No time wasted in the workshop - it couldn't be easier.

Great manoeuvrability, easy handling

Compact design and articulated steering ensure that the City Ranger 3070 can turn on a plate - almost. With an inside turning circle of just 1650 mm, the City Ranger 3070 can almost wrap itself around lamp posts and other obstructions in the city landscape.

Low noise and vibration levels for better comfort

Quality craftsmanship in every detail

A-frame mounting point for fast attachment change

Dedicated attachments (wide range available during 2020)

Quick-shift - one minute pit stop

Thanks to the unique Quick-shift, attachment changes can be made in just one minute. Simply pick-up the front attachment with the machine, turn the handle and all mechanical, hydraulic, electrical and water systems are connected and ready to go. It couldn't be easier!

Your direct benefits:

- Low initial investment
- More yearly working hours
= quick return on investment
- Just one machine
= less training for operators
- Less space needed for storage facilities

Technical specifications

Basic machine

Length	mm	3685
Width	mm	1200
Height / with beacon	mm	1990 / 2190
Weight basic machine ¹⁾	kg	1795
Payload	kg	1205
Gross vehicle weight	kg	3000
Turning circle - kerb to kerb	mm	4120
Turning circle - inside	mm	1650
Engine: Perkins diesel 404F-E22TA	hp / kW	67 / 50
4-wheel drive		Standard

¹⁾ Includes: 75 kg driver and 90% fuel capacity

Unique cabin design

- for a great working environment and safe operation

For an operator working many hours in the machine, a good working environment is important. Here the cabin design plays an important role.

All controls right at hand

To ensure a relaxed operation of the City Ranger 3070, the centrally placed and comfortable seat has a multi-adjustable armrest with integrated joystick and control buttons. The controls are intuitive and easy to use. With the arm resting comfortably all functions are right at the operators fingertips.

360 degree view of work area

The City Ranger 3070 has with its glass cabin a perfect view of the work area and the surrounding traffic. The cabin frames are slim which reduces blind spots to a minimum. This panoramic view allows for efficient operation close to obstacles without adding strain to the operator increasing safety for both operator and machine.

The large lightly curved glass doors allow for easy entry and exit of the cabin, and they contribute to the experience of a spacious cabin.

Air conditioning adds extra comfort

On a hot summer day the standard air conditioning adds extra comfort in the cabin and the strategically placed air ducts ensure a good circulation of the air in the spacious cabin. An extra air duct is placed in the storage compartment making it possible to keep a drink and lunch box cooled. Air conditioning is also beneficial in keeping dew of the windscreen on moist days. A high grade pollen filter (F7) reduces the amount of dust entering the cabin.

A good working environment is not only important for the well-being of the operator, but it is also important for efficient and safe performance.

Air ducts

The strategically placed air ducts are easily adjusted to suit the air circulation needs in the cabin.

Air cooled glove box

On the right side of the seat there is a closed glove compartment. This has an air duct in it, which helps keep a lunch box or a drink cooled during the day.

Storage facilities

On the left side a cup holder, power outlet and storage facilities adds to a good working environment. The optional radio is also placed here.

360 degree view from the cabin

The cabin has a 360 view to the surroundings giving the operator the best possible view of the working environment and the surrounding traffic - maybe even the best on the market. Furthermore, controls are right at hand and offers multiple adjustments for a good ergonomic working position.

Multi-adjustable armrest with controls

Resting the arm comfortably on the multi-adjustable armrest, the operator will be in full control of the machine and functions. With the controls right at hand, the operator can focus on traffic and the task at hand.

Advanced technology

The City Ranger 3070 is controlled by software developed in-house by Egholm ensuring a deep understanding of the advanced technology. This insight is converted into an intuitive display which guides the operator in choosing the right settings and optimal adjustments. Settings are optimised for the individual attachment.

Working environment

Key elements for optimum operator comfort

Many elements play an important role in order to ensure a comfortable and efficient working environment.

Low noise

We all know that being in an environment with a lot of noise is strenuous. Therefore, a cabin with low noise is important for the operator. The basic machine has a driver-perceived noise level of only 69 dB(A), the City Ranger 3070 is the best in its class (measured in accordance to 2009/76/EEC).

Outside noise is, however, also important in order to consider the environment in which the machine operates in. The passing noise of the City Ranger 3070 is measured at 76 dB(A) (measured in accordance to 2009/63/EEC). A low noise level is especially important when operating in resi-

dential areas or other areas where people are in the vicinity of the working area - like parks, cafes or pedestrian zones.

Driving comfort

The City Ranger 3070 has a long wheelbase which is an advantage when it comes to absorbing dips and bumps during transport.

The strong articulation point also adds to driving comfort because it allows for an oscillating movement between front and rear chassis of ± 8 degrees. This means that when the rear part for instance passes a bump in the road, this will not to the same extent be felt in the driving compartment because the articulation point will allow for an individual swaying of front and rear chassis.

Adapt the working position to the operator

In order to provide the operator with the most comfortable working position, there are several elements that can be adjusted. The seat and armrest are individually adjustable and the steering column is 3-way adjustable. This allows for a comfortable seating position.

Strong articulation point

The strong articulation point allows for an oscillating movement between front and rear chassis of ± 8 degrees.

t in focus

Easy driving

Several technologies support easy handling and optimal performance. The one gear engine technology makes the machine very simple to drive and efficient in various terrains and in both work and transport mode.

With the optional cruise control the inching function is integrated in the brake pedal allowing the operator to reduce the speed without reducing the engine rpm. This ensures that pressure remains the same on the hydraulics so you still have optimal sweeping or grass cutting performance while you are driving slowly around obstacles.

Optional seat offers the operator even more comfort as it allows for individual adjustment of the seat cushion. It can be tilted and moved forward for better leg support. Furthermore, it has adjustable lumbar support and it is heated for added comfort in cold weather. As it has a 3-point seatbelt, it also offers extra safety for the operator. It has the same multi-adjustable armrests as the standard seat.

Cruise control (option)

With the optional cruise control the inching function is integrated in the brake pedal allowing the operator to reduce the speed without reducing the engine rpm.

Advanced technology

- for a high performing utility machine

In designing the new City Ranger 3070 we have taken the best from our many years' of experience with developing and producing compact utility machines and combined it with new technologies. We feel confident in saying it is a well proven concept in a complete new perspective.

Unique engine compartment

The unique engine compartment adds several benefits to the machine.

High cooling effect: With two radiators placed at the front of the engine compartment and the fan at the rear of the compartment several benefits are achieved. Having two radiators doubles the cooling effect which reduces the airflow demand. With a lower airflow there is a lower tendency for dirt to build up on the surface of the radiators, hence a better cooling effect is achieved. After

having cooled the hydraulic oil and water in the radiators, the air continues through the engine compartment which also cools the engine and components in the process. Different sensors monitor the cooling and adjusts the fan speed to match the needed airflow / cooling and reverses the airflow if the radiators need to have material blown away from the surface. This cleaning process is especially beneficial when cutting grass.

Noise reduction: With the fan placed separate from the radiator it is possible to have a larger fan, which can create the same airflow at a lower rpm reducing the noise accordingly. As the air is transported through an enclosed engine compartment which also reduces the noise levels from the engine.

These benefits will be appreciated by both the operator and the people in the area where the machine operates.

Highly manoeuvrable

The City Ranger 3070 is articulated making it highly manoeuvrable in tight spaces. The inside turning circle of the basic machine is only 1650 mm. Thanks to the short overhang of the front and back, the outside turning circle is only 4300 mm (wall to wall).

Since the articulation joint only has a one-dimensional bend, it significantly reduces the strain and wear on the hoses, which again will reduce the running and maintenance costs.

High manoeuvrability

The City Ranger 3070 is articulated making it highly manoeuvrable in tight spaces. The inside turning circle of the basic machine is only 1650 mm.

Perkins diesel engine

The 2.2 commonrail diesel engine from Perkins is a strong engine with 67 HP at 2800 rpm making it perfect for the hard work of the City Ranger 3070. It meets the green zone requirements and can, therefore, also be used in cities with a high focus on the environment.

The engine offers plenty of power for both driving and running the different attachments. The surplus of power means it will often be possible to run at lower rpm in the ECO mode, which will reduce both fuel consumption and noise levels. It leaves the impression of a machine in good balance.

Powerful diesel engine

Equipped with an engine of 67 HP at 2800 rpm, the City Ranger 3070 has power for even the most toughest jobs.

Spring, summer and autumn

- the City Ranger 3070 is ready for outdoor maintenance

With the unique Quick-shift function it is easy to perform different tasks in one day or during the week.

Sweeping even in confined places

The City Ranger 3070 can sweep in very narrow places with its low turning circle and get around in extremely confined areas.

Reduce wear and enhance performance

Activating the hydraulic weight distribution makes the front brushes follow ground variations. In addition, the operator can control the brush pressure from the controls in the cabin. Being able to easily adjust the brush pressure to match the types and levels of debris allows the driver to drive with the lowest needed pressure on the brushes, and thereby reduce the wear on them. The system enhances performance and reduces operating costs.

Effective dust suppression

The hopper has a capacity of 1 m³. As standard, it is equipped with a rotary filter system, which creates a fine water cloud inside the hopper ensuring an effective dust suppression. This reduces the risk of letting dust particles back out into the surrounding area. The system also ensures an effective filling of the hopper. An alarm will be visible in the display (H₂O symbol) and an on/off noise alarm can be heard in the cabin in case of lack of water in

the rotation filter. This reduces the risk of damage to the rotation filter and minimizes repair costs. During empty cycles operators only need to empty the hopper and refill fresh water, reducing time away from the working area. In general, it is sufficient with the rotation filter system.

Recirculation system

For larger sweeping jobs in areas with more debris, we recommend the use of the recirculation system (option). Before starting to sweep, the container must be filled with water (approx. 125 litre). Through the recirculation system in the bottom of the container, water is led out in the suction hose close to the suction mouth. This extra water helps keeping the suction hose clean and together with the standard filtration system is retain the dust so that it is kept in the container.

Suction sweeper features and options:

- Water in the suction mouth
- Very high tipping height of 1700 mm
- The lid will open completely
- "Shake function" controlled from cabin
- 5 m wander hose (option)
- High pressure washer (option)
- Recirculation system (option)

EUnited certification

The suction sweeper unit for the City Ranger 3070 is certified with a 4-star rating according to the new EUnited certification for PM10 and PM2.5.

autumn

Healthy looking lawns

The mulch and rotary mower provides ideal flexibility for users operating in different kind of grass types and surfaces. Two high velocity knives ensure a professional cut. The knives rotate in opposite direction distributing the grass evenly on the surface, thus avoiding lumps of grass left on the lawn or park area. Our engineers have gone to great lengths to increase the tip speed of the rotary blades, thereby delivering an effective cutting result at high working speeds. The result is a well-groomed and healthy looking lawn.

Light footed

With a weight of 1720 kg, the City Ranger 3070 is light footed enough to drive on sensitive areas. If ground pressure should be reduced even further, special turf tires are available as an optional extra.

Slow down without loss of cutting power

By choosing the optional cruise control an inching function is also included. The inch function allows the operator to drive closely and slowly around obstacles with out loosing effect on the mower, as it keeps the rpm of the engine at the initial speed. These functions add both comfort and efficiency to the operation.

Sweeping in confined places

The City Ranger 3070 can sweep in very narrow places with its low turning circle and get around in extremely confined areas. The mechanical front brushes are collision-proof which prolong their lifetime as well as is an advantage for the surrounding elements.

High pressure washer and wand hose

For extra cleaning functions, the hopper can be equipped with a high pressure washer with hand lance and a 5 metre wand hose.

Efficient lawn moving

The knives rotate in opposite direction distributing the grass evenly on the surface, thus avoiding lumps of grass left on the lawn or park area.

Easy maintenance

Daily cleaning and maintenance of the mower is easy with the hydraulically controlled tilting function controlled from the cabin. With this function, the mower can be tilted to a 60 degree angle making it easy for the operator to remove the harsh grass acids and maintain the knives and protective enclosure. This helps to keep the total costs of ownership to a minimum.

Rotary mower features and options: Available nov. 2020

- Hydraulic tilting
- Opposite rotating knives for optimal distribution
- Double-sided toothed belt drive with safety factor of 1.7
- Mulch mower (kit) (option)
- Collection mower (kit) (option)
- Rear discharge hatches (option)
- Turf tires (option)

Powerful winter maintenance

- keeps your investment working all year

Use your City Ranger 3070 to keep the traffic running and pedestrian zones safe when snow starts falling.

A strong machine for winter tasks

Several aspects of the City Ranger 3070 makes it a suitable machine for winter maintenance as well.

- High performance engine with 67 HP
- Permanent 4WD
- Dedicated attachments

High performance winter attachments

The City Ranger 3070 is a perfect winter solution for housing associations, smaller and larger contractors and municipalities. The dedicated attachments are very efficient and with the low noise level, operation in residential areas is not a problem.

Winter attachments - available September 2020:

- Snow plough
- Snow sweeper
- Salt and sand spreader

The snow plough and the snow sweeper can work in tandem with the salt and sand spreader, enabling you to do two tasks at the same time - i.e. clearing the snow and spreading salt or sand on the icy streets and paths, all in one pass.

As with the other attachments, the winter attachments can also be changed in less than a minute - also the salt and sand spreader! The salt and sand spreader is easily changed with the optional stand or a fork-lift and the snow sweeper has integrated stand legs.

High quality paint

Coated in C5 all winter attachments are well-protected against the winter environment. Withstanding over 1500 hours of salt spray in the C5 test, the coating provides you with high quality attachments with good resistance ensuring a long lifetime.

Keep a firm grip in slippery conditions

If you lose grip on one wheel the 4WD ensures that power is automatically transferred to the opposite wheel crosswise meaning, that if you lose grip on the rear right wheel the power will be transferred to the left front wheel and vice versa.

Powerful machine for winter tasks

The City Ranger 3070 is a valued asset for all your winter tasks - even in more demanding areas.

Snow plough - available September 2020

The snow plough handles up to 450 mm of heavy snow. The clearing width is between 1450 and 1600 mm all depending on the inclination of the blade. Maximum inclination is 25° and it is adjusted from the comfort of the cabin.

Snow sweeper - available September 2020

The snow sweeper easily sweeps away up to 250 mm of light fluffy snow. The clearing width turned to the maximum swivel angle of 25° is 1300 mm, and with the brush straight it is 1520 mm. The brush can also rotate in a reverse direction.

Salt and sand spreader - available September 2020

The salt and sand spreader is a perfect match to the front attachments. It has a maximum capacity of 600 l or 1000 kg all depending of the material. The spreading width can be adjusted between 1500-6000 mm.

Caring for the operator

At Egholm we care about the working environment and the ergonomics of the operator. Many elements play an important role in order to ensure a comfortable and efficient working environment.

360 degree view from the cabin: The cabin has a 360 view to the surroundings giving the operator the best possible view of the working environment and the surrounding traffic - maybe even the best on the market.

In the City Ranger 3070 there is easy access to the drivers seat and the operation of all functions and handles - in order to achieve maximum operator comfort.

The standard air condition adds extra comfort in the cabin and the strategically placed air ducts ensure a good circulation of the air in the spacious cabin. An extra air duct is placed in the storage compartment making it possible to keep a drink and lunch box cooled. Air conditioning is also beneficial in keeping dew of the windscreen on moist days.

Low cabin noise: With the fan placed separate from the radiator it is possible to have a larger fan, which can create the same airflow at a lower rpm reducing the noise accordingly. As the air is transported through an enclosed engine compartment which also reduces the noise levels from the engine.

In order to provide the operator with the most comfortable working position, the seat and armrest are individually adjustable and the steering column is 3-way adjustable. This allows for a comfortable seating position.

Impressive capacity

12,500 m²/h

The City Ranger 3070 will easily cover 12500 m² per hour both when cutting grass or using the suction/sweeper attachment.

Quick-shift Attachment change in 1 minute

Power and torque for all tasks

With 4-wheel drive and the powerful diesel engine from Perkins producing a torque of 208 Nm at 1800 rpm, the City Ranger 3070 delivers all the power you need for demanding tasks all year round.

**165
cm**
inside turning
circle

Access to all areas:

With the powerful articulation, the City Ranger 3070 has an incredibly small inside turning circle of only 1650 mm allowing the operator to access confined spaces and to operate close to obstacles. Also with the basic machine weighing only 1795 kg (including 75 kg driver and 90% fuel capacity), ground pressure is low enough to be used on sensitive surfaces like lawns and pavements.

Honest Work.

Egholm A/S develops, produces and markets utility machines that keep roads, parks and outdoor areas clean and inviting all year round. We supply functional quality machines and attachments to people who do an honest day's work keeping our cities clean and attractive. With special attachments developed for the machines, Egholm machines deliver perfect results no matter the task at hand. Built by craftsmen in Denmark, Egholm machines are in operation in cities and parks all over the world.

Honest Machines.

Egholm utility machines are developed by people who are passionate about technology and innovation. We listen to the people driving, using and servicing Egholm machines, because they are the true experts. It is our mission to design, build and market utility machines that deliver perfect results in real life. Egholm machines are honest machines - not just because they deliver comfort, safety and strong end results: They are also a sound investment for years to come and give you outstanding return on your investment.

Honest People.

We want you to think of us as your partner in every single way. And we always insist on reliability, trust and honesty in our partnership with you and with our network of dealers and service partners. We are straightforward and direct in our communication and in our dealings with everyone. Our belief in hard work and unwillingness to compromise helps us deliver the quality for which we are known. And we believe it is reflected by the machines we build for you, as well.
